1. What if the yellow was a little opaque so that the map could be seen under it slightly?
2. Perhaps when one of these is clicked we could have an h3/ text appear under the search button saying what it is. eg -hotels / food...
3. Would this work as a search bar? what if the user doesn't know the exact name, would it have autocomplete functionality?
4. Unclear what these will do, I assume they are filtering something, but what?
5. Could this perhaps be closer / next to the input field?
6. Does this mean im searching for a car in wellington?
7. I would like to know what the app is about, or what am I searching for.
8. Bright colours are really nice!
9. Easy to understand icons.
10. Title or logo would be nice. just by the color scheme alone it reminds me of trade me.
11. Would like to see what the help button does :) modal pop up?
12. If this is accommodation category, maybe a bed icon?
13. I find the icons are easy to understand, but maybe have small text underneath the icons just to make it a bit more obvious/ user friendly?
14. Nice slide animation.
15. Some sort of explanation of what exactly the app does and why I'm searching for a location would be good.
16. Does this pop up and tell me what to do?
17. I think once a title or logo is added the app will be easier to understand, if it's for Wellington the colour is good as it links to the Wellington council site

1. These will look good as custom markers.
2. I think having the button options up here would be great too, so that you could turn the data off an on.
3. It will need a get directions btn when the info modal pops up.
4. Maybe have a div displaying results?
5. Nice modal design.
6. Maybe a navbar on the bottom, keep things minimal but not too plain. And a search bar so you don't have to go back to previous page.
7. Maybe could include custom icons using this pin with a smaller icons showing the catagories.
